

25 Basic Python Programs

Practice Questions for Beginners

Practice rules

Use basic variables, input/output, operators, conditions, and loops only.

Not allowed: List | Set | Tuple | Dictionary | File Handling

1**Print a Message**

Write a Python program to print **Welcome to Python Programming!** on the screen.

2**Add Two Numbers**

Accept two numbers from the user, add them, and display the result.

3**Arithmetic Operations**

Accept two numbers and display their addition, subtraction, multiplication, division, and remainder.

4**Largest of Two Numbers**

Accept two numbers and determine which number is larger.

5**Largest of Three Numbers**

Accept three numbers and find the largest using conditional statements.

6**Positive, Negative, or Zero**

Accept a number and check whether it is positive, negative, or zero.

7**Even or Odd**

Accept an integer and check whether it is even or odd.

8**Leap Year**

Accept a year and determine whether it is a leap year.

9**Voting Eligibility**

Accept a person's age and check whether the person is eligible to vote.

10

Divisible by 5 and 11

Accept a number and check whether it is divisible by both 5 and 11.

11

Vowel or Consonant

Accept an alphabet character and determine whether it is a vowel or consonant.

12

Character Type

Accept one character and identify whether it is an alphabet, digit, or special character.

13

Absolute Value

Accept a number and display its absolute value without using a collection.

14

Rectangle Calculations

Accept the length and width of a rectangle; calculate its area and perimeter.

15

Circle Calculations

Accept the radius of a circle; calculate its area and circumference.

16

Celsius to Fahrenheit

Accept a temperature in Celsius and convert it to Fahrenheit.

17

Fahrenheit to Celsius

Accept a temperature in Fahrenheit and convert it to Celsius.

18

Simple Interest

Accept principal, rate, and time; calculate the simple interest and total amount.

19

Compound Interest

Accept principal, annual rate, time, and compounding frequency; calculate compound interest.

20

Employee Gross Salary

Accept basic salary and calculate gross salary using suitable HRA and DA percentages.

21

Student Result and Grade

Accept marks for five subjects using separate variables; calculate total, percentage, and grade.

22

Electricity Bill

Accept consumed units and calculate the bill using slab-based rates.

23

Calculator Using match-case

Accept two numbers and an operator; perform the selected operation using **match-case**.

24

Valid Triangle

Accept three side lengths and check whether they can form a valid triangle.

25

Triangle Type

Accept three side lengths and identify the triangle as equilateral, isosceles, or scalene.

Practice suggestion: First write the algorithm, then code the program, test valid and invalid inputs, and finally improve the output formatting.
